
TQC 2026 PC

Business meeting

Program Committee (73 members!)

Chairs: Rotem Arnon & Aram Harrow

Abhinav Deshpande	Eric Culf	Jordi Tura	Peter Brown	Tongyang Li
Aleksander Kubica	Ernest Tan	Joseph Carolan	Philippe Faist	Tony Metger
Alexander Schmidhuber	Felix Leditzky	Joseph M. Renes	Qisheng Wang	Tuvia Gefen
Anand Natarajan	Francesco Buscemi	Lewis Wooltorton	Ramona Wolf	Ulysse Chabaud
Andreas Winter	Freek Witteveen	Liang Jiang	Robert T. König	Yihui Quek
Angela Capel	Giulio Chiribella	Louis Golowich	Sam McArdle	Yuxiang Yang
Anurag Anshu	Gorjan Alagic	Ludovico Lami	Sean Hallgren	Zhiyang (Sunny) He
Barak Nehoran	Hao-Chung Cheng	Luowen Qian	Sergey Bravyi	
Chinmay Nirkhe	Ian George	Makrand Sinha	Shalev Ben David	
Connor Paddock	Isaac Kim	Marcel Hinsche	Shlok Nahar	
David Perez-Garcia	Jean-Daniel Bancal	Matthias Christandl	Simon Apers	
David Sutter	Jef Pauwels	Michael Wolf	Srinivasan Arunachalam	
Dhara Thakkar	Jiaqing Jiang	Mirjam Weilenmann	Tamara Kohler	
Dominik Hangleiter	Joe Renes	Mischa Woods	Thiago Bergamaschi	
Eleni Diamanti	Jonas Helsen	Nicholas Spooner	Thomas Hahn	
Eric Chitambar	Jonathan Conrad	Nicolas Delfosse	Tomoyuki Morimae	

Some numbers – submissions

- **390 talk submissions** (after a few withdraws / out of scope)
 - Out of which 42 for the “With Proceedings” track (~11%)
 - Additional 46 poster-only submissions; all accepted.

Some numbers – submissions

- **390 talk submissions** (after a few withdraws / out of scope)
 - Out of which 42 for the “With Proceedings” track (~11%)
 - Additional 46 poster-only submissions; all accepted.
- **87 talk submissions accepted (~22% acceptance rate)**
 - Out of which 8 submissions accepted for the proceedings (less than usual for the proceedings, to maintain scientific excellence)

Some numbers – submissions

- **390 talk submissions** (after a few withdraws / out of scope)
 - Out of which 42 for the “With Proceedings” track (~11%)
 - Additional 46 poster-only submissions; all accepted.
- **87 talk submissions accepted (~22% acceptance rate)**
 - Out of which 8 submissions accepted for the proceedings
(less than usual for the proceedings, to maintain scientific excellence)
- **1,144 reviews in total**
 - 28 submissions with 2 reviews
 - The rest with 3 reviews (or more)

Some numbers – submissions

- **390 talk submissions** (after a few withdraws / out of scope)
 - Out of which 42 for the “With Proceedings” track (~11%)
 - Additional 46 poster-only submissions; all accepted.
- **87 talk submissions accepted (~22% acceptance rate)**
 - Out of which 8 submissions accepted for the proceedings
(less than usual for the proceedings, to maintain scientific excellence)
- **1,144 reviews in total**
 - 28 submissions with 2 reviews
 - The rest with 3 reviews (or more)
- 7 online talks due to visa issues;
1 talk removed from the program since the authors couldn't attend

Some numbers - submission topics

Topic	% of submissions	% of accepts
quantum algorithms	29%	23% ↓
quantum information theory	26%	22%
quantum complexity theory	18%	27% ↑
quantum learning, tomography and many-body theory	17%	18%
quantum error correction and fault-tolerant quantum computing	15%	13%
quantum simulations	13%	10%
quantum cryptography	11%	16% ↑
quantum foundations	11%	6% ↓

Only the most common topics are listed.

Submissions can have multiple topics.

Careful attention

Some numbers – PC work load

- 15-18 assigned reviews for most PC member
(Average PC member submitted 15.3 reviews)

Some numbers – PC work load

- 15-18 assigned reviews for most PC member
(Average PC member submitted 15.3 reviews)
- We asked the PC members for anonymous feedback in the end
(20/73 members replied, so obviously they ran out of energy...)

Review load (15-17 submissions per PC member)

20 responses

- The review load was fine
- Having a lower load would have improved my reviews
- The review load was too high for me
- The review load was fine, but I should have used more subreviewers and will do so in the future

Review load (15-17 submissions per PC member)
20 responses

- The review load was fine
- Having a lower load would have improved my reviews
- The review load was too high for me
- The review load was fine, but I should have used more subreviewers and will do so in the future

=> reducing the load would have helped, but it becomes very hard to find PC members in this scale

Size of the PC

- Need a large PC due to the growing number of submissions

Size of the PC

- Need a large PC due to the growing number of submissions
- Hard to recruit people:
 - Many people are burnt out from QIP: QIP PC's work ends around November-December and this is when we recruit PC members for TQC
 - ITCS and QCrypt PCs' work overlap (maybe more)

Size of the PC

- Need a large PC due to the growing number of submissions
- Hard to recruit people:
 - Many people are burnt out from QIP: QIP PC's work ends around November-December and this is when we recruit PC members for TQC
 - ITCS and QCrypt PCs' work overlap (maybe more)
- We believe that an **active discussion phase is a must for dealing with AI submissions/reviews** in the years to come. This means we need the PC members to not be burnt out already in the reviewing phase.
 - (We didn't encounter significant "AI issues"-- one submission and one review were suspected)

 - (We didn't encounter significant "AI issues"-- one submission and one review were suspected)
- **Shifting the date** of the conference a bit to avoid some overlap with other PCs might be beneficial.

New: Transparent peer-review

- Portions of reviews of **accepted papers** were posted on scirate.

New: Transparent peer-review

- Portions of reviews of **accepted papers** were posted on scirate.
 - To implement this, reviewers divided reviews into PC-only, PC+authors, **PC+authors+scirate**. (We also verified that there is nothing offending)
 - Reviews were posted anonymously, signed by the PC.

New: Transparent peer-review

- Portions of reviews of **accepted papers** were posted on scirate.
 - To implement this, reviewers divided reviews into PC-only, PC+authors, **PC+authors+scirate**. (We also verified that there is nothing offending)
 - Reviews were posted anonymously, signed by the PC.
- Goals:
 - The community benefits more broadly from the hard work of the PC
 - Highlighting accepted papers
 - Giving public examples of reviews

New: Transparent peer-review

- Authors were given the opportunity to opt-out in advance.
 - 17% of all submissions opt-out; (**83% were happy** with the idea)
 - 17% of accepted submissions opt-out.
 - While technically not necessary since anyone can comment on any paper on scirate without author permission, our goal was not to make this an adversarial process.

New: Transparent peer-review

- Authors were given the opportunity to opt-out in advance.
 - 17% of all submissions opt-out; (**83% were happy** with the idea)
 - 17% of accepted submissions opt-out.
 - While technically not necessary since anyone can comment on any paper on scirate without author permission, our goal was not to make this an adversarial process.
- We heard no complaints about this policy from authors and reviewers.

- PC members indicated anonymously that this didn't make their work harder and that they are happy that their work has a broader impact.
- **We recommend continuing it.**

New: Posting 3-page abstracts of accepted papers

- Some 3-page abstracts were published on TQC's website (with the authors' permission). Motivation:
 - Like traditional abstracts, these help the audience decide which talks to attend.
 - Don't waste the authors' effort put into the preparation
 - 3-page abstracts are a unique format and it's not easy for junior researchers to find good examples of them.

New: Posting 3-page abstracts of accepted papers

- Some 3-page abstracts were published on TQC's website (with the authors' permission). Motivation:
 - Like traditional abstracts, these help the audience decide which talks to attend.
 - Don't waste the authors' effort put into the preparation
 - 3-page abstracts are a unique format and it's not easy for junior researchers to find good examples of them.
- No DOI and do not "count" as a publication / part of the proceedings.

- Some 3-page abstracts were published on TQC's website (with the authors' permission). Motivation:
 - Like traditional abstracts, these help the audience decide which talks to attend.
 - Don't waste the authors' effort put into the preparation
 - 3-page abstracts are a unique format and it's not easy for junior researchers to find good examples of them.
- No DOI and do not "count" as a publication / part of the proceedings.
- 20% of authors actively accepted to have their abstracts posted (we sent the request too late).

New: Posting 3-page abstracts of accepted papers

- We see mild benefits and no downsides, and recommend continuing this.

New: Posting 3-page abstracts of accepted papers

- We see mild benefits and no downsides, and recommend continuing this.
- A possible alternative to requesting final arXiv versions (currently requested for QIP).

New: Posting 3-page abstracts of accepted papers

- We see mild benefits and no downsides, and recommend continuing this.
- A possible alternative to requesting final arXiv versions (currently requested for QIP).
- (An alternate perspective: the PC co-chair would like to drop 3-page abstracts altogether; the disadvantage is that it can increase the workload of the PC members.)

Very special thanks to:

SC chair: **Frédéric Magniez**

LOC and especially **Amélie Proulx** (administrative coordinator)

Technical operations chair: **Christian Schaffner**

Thanks to all PC members!
