

QIP'15

Program Committee Report

Ronald de Wolf

UNIVERSITEIT VAN AMSTERDAM

Who?

► Program committee:

Aleksandrs Belovs (MIT)

Sergey Bravyi (IBM)

Dan Browne (UCL)

Roger Colbeck (York)

Nilanjana Datta (Cambridge)

Gemma De las Cuevas (MPQ)

Jens Eisert (Berlin)

Aram Harrow (MIT)

Masahito Hayashi (Nagoya, NUS)

Paweł Horodecki (Gdansk)

Min-Hsiu Hsieh (UTS)

Zhengfeng Ji (Waterloo, CAS)

Robert König (Waterloo)

Sophie Laplante (Paris)

Hoi-Kwong Lo (Toronto)

Ashley Montanaro (Bristol)

Martin Rötteler (Microsoft)

Miklos Santha (Paris, NUS)

John Smolin (IBM)

Matthias Troyer (ETH)

Yaoyun Shi (Michigan)

Frank Verstraete (Ghent, Vienna)

Andreas Winter (Barcelona)

Ronald de Wolf (CWI Amsterdam)

Who?

- ▶ Program committee:

Aleksandrs Belovs (MIT)

Sergey Bravyi (IBM)

Dan Browne (UCL)

Roger Colbeck (York)

Nilanjana Datta (Cambridge)

Gemma De las Cuevas (MPQ)

Jens Eisert (Berlin)

Matthias Troyer (ETH)

Yaoyun Shi (Michigan)

Frank Verstraete (Ghent, Vienna)

Andreas Winter (Barcelona)

Ronald de Wolf (CWI Amsterdam)

- ▶ Much help from local organization:

Runyao Duan (chair of Steering Committee),

Yuan Feng (help with EasyChair), others ...

Talk submissions

- ▶ First round of submissions (Sep 12):
197 talk or talk-or-poster submissions (1 withdrawn)

Talk submissions

- ▶ First round of submissions (Sep 12):
197 talk or talk-or-poster submissions (1 withdrawn)
Comparison: last year there were 222

Talk submissions

- ▶ First round of submissions (Sep 12):
197 talk or talk-or-poster submissions (1 withdrawn)
Comparison: last year there were 222
- ▶ 3 PC members for each submission;
25 submissions per PC member

Talk submissions

- ▶ First round of submissions (Sep 12):
197 talk or talk-or-poster submissions (1 withdrawn)
Comparison: last year there were 222
- ▶ 3 PC members for each submission;
25 submissions per PC member
- ▶ 3 weeks of refereeing, 2 weeks of discussion
NB: this is much faster than typical TCS conference

Talk submissions

- ▶ First round of submissions (Sep 12):
197 talk or talk-or-poster submissions (1 withdrawn)
Comparison: last year there were 222
- ▶ 3 PC members for each submission;
25 submissions per PC member
- ▶ 3 weeks of refereeing, 2 weeks of discussion
NB: this is much faster than typical TCS conference
- ▶ Results:
 1. 39 accepts (incl. 2 mergers) = 20%
SC invited 3 more speakers $\Rightarrow$ 40 talks in the program
 2. 6 of these recommended to SC for plenary status
 3. one Best Student paper

Some statistics

- ▶ Reviews: 601 (3 or more per submission)
External reviewers: 142
External reviews: 220

Some statistics

- ▶ Reviews: 601 (3 or more per submission)

External reviewers: 142

External reviews: 220

- ▶ Breakdown of # submitters and acceptance rate by country:

Australia	43	0.10
Belgium	16	0.16
Canada	39	0.54
China	10	0.00
France	9	0.07
Germany	43	0.27
India	10	0.00
Japan	20	0.15
Netherlands	7	0.00
Poland	12	0.06
Singapore	23	0.05
Spain	17	0.16
Switzerland	19	0.03
United Kingdom	53	0.18
United States	96	0.22

Poster submissions

- ▶ QIP poster policy:
accept everything unless it's clearly wrong or out of scope

Poster submissions

- ▶ QIP poster policy:
accept everything unless it's clearly wrong or out of scope
- ▶ First round: 102 posters accepted (5 poster-only submissions, all rejected talk-or-poster submissions)

Poster submissions

- ▶ QIP poster policy:
accept everything unless it's clearly wrong or out of scope
- ▶ First round: 102 posters accepted (5 poster-only submissions, all rejected talk-or-poster submissions)
- ▶ Second round: 92 more posters, 90 accepted

Poster submissions

- ▶ QIP poster policy:
accept everything unless it's clearly wrong or out of scope
- ▶ First round: 102 posters accepted (5 poster-only submissions, all rejected talk-or-poster submissions)
- ▶ Second round: 92 more posters, 90 accepted
- ▶ Quite a few poster submitters withdrew afterwards

NB: when deciding accepted talks, the difference between talk-only or talk-or-poster submissions is ignored

Points for discussion

Points for discussion

- ▶ We could have accepted 20–30 more good papers.
Future choice: **accept more papers?** Implies parallel sessions.

Points for discussion

- ▶ We could have accepted 20–30 more good papers.
Future choice: **accept more papers?** Implies parallel sessions.
Pro: more people happy, better representation of research

Points for discussion

- ▶ We could have accepted 20–30 more good papers.
Future choice: **accept more papers?** Implies parallel sessions.
Pro: more people happy, better representation of research
Con: community will be more split, conference needs two medium-size lecture rooms (what about plenary talks?)

Points for discussion

- ▶ We could have accepted 20–30 more good papers.
Future choice: **accept more papers?** Implies parallel sessions.
Pro: more people happy, better representation of research
Con: community will be more split, conference needs two medium-size lecture rooms (what about plenary talks?)
- ▶ Anecdotal feedback from authors: some **reviews were sloppy**.

Points for discussion

- ▶ We could have accepted 20–30 more good papers.
Future choice: **accept more papers?** Implies parallel sessions.
Pro: more people happy, better representation of research
Con: community will be more split, conference needs two medium-size lecture rooms (what about plenary talks?)
- ▶ Anecdotal feedback from authors: some **reviews were sloppy**.
Can't expect too much in 3 weeks of refereeing.

Points for discussion

- ▶ We could have accepted 20–30 more good papers.
Future choice: **accept more papers?** Implies parallel sessions.
Pro: more people happy, better representation of research
Con: community will be more split, conference needs two medium-size lecture rooms (what about plenary talks?)
- ▶ Anecdotal feedback from authors: some **reviews were sloppy**.
Can't expect too much in 3 weeks of refereeing.
Difference in refereeing culture between CS and physics:
CS reviewers tend to be more detailed and more critical

Points for discussion

- ▶ We could have accepted 20–30 more good papers.
Future choice: **accept more papers?** Implies parallel sessions.
Pro: more people happy, better representation of research
Con: community will be more split, conference needs two medium-size lecture rooms (what about plenary talks?)
- ▶ Anecdotal feedback from authors: some **reviews were sloppy**.
Can't expect too much in 3 weeks of refereeing.
Difference in refereeing culture between CS and physics:
CS reviewers tend to be more detailed and more critical
- ▶ Do we want the **3-page abstract** submission format?
My opinion: it costs the community more than it gains the PC

Points for discussion

- ▶ We could have accepted 20–30 more good papers.
Future choice: [accept more papers?](#) Implies parallel sessions.
Pro: more people happy, better representation of research
Con: community will be more split, conference needs two medium-size lecture rooms (what about plenary talks?)
- ▶ Anecdotal feedback from authors: some [reviews were sloppy](#).
Can't expect too much in 3 weeks of refereeing.
Difference in refereeing culture between CS and physics:
CS reviewers tend to be more detailed and more critical
- ▶ Do we want the [3-page abstract](#) submission format?
My opinion: it costs the community more than it gains the PC
- ▶ Do we want [abstracts on the website](#)?
My opinion: yes for talks, no for posters

Points for discussion

- ▶ We could have accepted 20–30 more good papers.
Future choice: [accept more papers?](#) Implies parallel sessions.
Pro: more people happy, better representation of research
Con: community will be more split, conference needs two medium-size lecture rooms (what about plenary talks?)
- ▶ Anecdotal feedback from authors: some [reviews were sloppy](#).
Can't expect too much in 3 weeks of refereeing.
Difference in refereeing culture between CS and physics:
CS reviewers tend to be more detailed and more critical
- ▶ Do we want the [3-page abstract](#) submission format?
My opinion: it costs the community more than it gains the PC
- ▶ Do we want [abstracts on the website](#)?
My opinion: yes for talks, no for posters
- ▶ Make [reviews public](#)? (say on Scirate, like TQC'14)
My opinion: PC summaries or redacted reviews for accepts
